- Abbreviations: RD: Actual value ("Reading"); FS: Full Scale;
- For the electrical data alternatively: 1000±200 Ohm possible
- The exact characteristic value is shown in the test report
- Note: The natural frequency only takes into account the load-conducting sensor parts with their specific geometries, masses and stiffnesses, but not other sensor components. The natural frequency is an indication of the dynamic design of the built environment for sensor integration and changes in frequency and direction as soon as additional masses are mounted on the sensor.
