

Torque sensor TD110a 1Nm/VA

Item number: 11079

Highlights

- Measurement of reaction torque
- Stainless steel version
- The sensor is available in spring steel

The TD110a torque sensor is suitable for measuring the reaction torque up to a nominal torque of 50 Nm. (cable-connected, non-rotating).

The torque sensor consists of an outer flange and an inner flange, which are connected to each other via 4 measuring spokes.

The torque sensor is fastened internally and externally with DIN912 M6 screws.

The TD110a torque sensor is used both in torque test benches for quality assurance and in production machines. The sensor is available in spring steel.
